

1200 Watts

- Configurable Power Supply
- Low Profile for 1U Applications
- Medical & IT Approvals
- Power from 850 W at Low Line to 1200 W at High Line
- Output Voltages from 3V3 to 60 V
- Module Power up to 300 W
- Parallel Options for Increased Versatility
- Optional Reverse Air Fans with No Load Derating
- 3 Year Warranty

Dimensions:

nanoflex:
N12: 4.20 x 11.50 x 1.67" (106.7 x 292.1 x 42.2 mm)

The N12 nanoflex configurable 1U power supply has been designed to maximize efficiency and minimize audible fan noise to combat the traditional challenges associated with low profile configurable products. The chassis can provide 850 W with universal input or 1200 W with high line (or line to line) with up to 4 outputs. These outputs are customer selected from a wide range of fixed or variable voltages between 3.3 V & 60 V DC. The N12 is suited to Industrial (IEC 60950) & Medical (IEC 60601) applications with earth leakage current below 300 μ A whilst returning excellent emission performance. This fully featured power supply can be controlled with analogue commands, provides a full 10 W (5 V/2 A) standby rail and a range of connectivity options.

Models & Ratings

Max Power 90 to 180 VAC	Max Power 180 to 264 VAC	Standby	Capacity	Width	Code
850 W	1200 W	5 V/2 A	4 Slots	4.2" (106.7 mm)	N12

Notes

For mechanical details, refer to pages 8 & 9.

Notes

For configurations, refer to page 2.

1. Module output voltage can be adjusted within given range using digital serial interface, external 1.5 to 5.0 V signal or inbuilt potentiometer.
2. The table shows the standard preset voltages available. For factory setting of other voltages a model order code will be assigned at the time of order.

Modules are populated from the right, when unit is viewed from the DC module end. The modules are configured such that an output requiring the highest number of paralleled modules would go first, then the next highest and so on. Once this sequence is complete or if two outputs use paralleled modules then modules are configured lowest to highest voltage again from the right when the unit is viewed from the DC module end.

DC Module End

Examples

1. 5V at 80 A, 12V at 12 A with no options: N12-CCHB-12A00

2. 24V at 10 A, 48V at 18 A with optional IEC Inlet: N12-RRRM-13A04

Input

Characteristic	Minimum	Typical	Maximum	Units	Notes & Conditions
Input Voltage - Operating	80		264	VAC	Derate output from 850 W at 90 VAC to 765 W at 85 VAC and 680 W at 80 VAC
Input Voltage - Fault condition			300	VAC	For 5 s maximum, without derating or damage
Input Frequency	47		63	Hz	400Hz operation okay but not covered by safety approval
Power Factor		0.98			230 VAC 100% load EN61000-3-2 class A
Input Current - Full Load		9.0 / 6.3		A	115 / 230 VAC
Inrush Current			70	A	264 VAC cold start, 25 °C
No Load Input Power		40 10		W	90 VAC, 4 modules fitted With Global Inhibit
Earth Leakage Current			270	µA	264 VAC, 60 Hz
Input Protection	F12.5 A / 250 V internal fuse fitted in line and neutral				

Output

Characteristic	Minimum	Typical	Maximum	Units	Notes & Conditions
Output Voltage	3.3		60	VDC	See Modules table
Initial Set Accuracy			±1	%	
Output Voltage Adjustment					See Modules table. Via inbuilt potentiometer, 1.5 V to 5.0 V signal or digital control
Minimum Load	0			A	No minimum load
Start Up Delay		2.4	3.5	s	At 90 VAC, full load room temp., max at -20 °C
Hold Up Time	16/10	18/12		ms	850/1200 W, 28 V and 30 V outputs have limited hold up and no AC fail warning
Line Regulation			0.5	%	
Load Regulation			1	%	
Transient Response		2		%	Recovery to within 1% in less than 500 µs for a 25% step load change
Over/Undershoot			5	%	At turn on and turn off
Ripple & Noise			1	% pk-pk	
Overvoltage Protection	115		140	%	Latching, recycle input to restart
Overload Protection	110		150	% I nom	
Short Circuit Protection					Hiccup (trip & restart), see fig. 2
Temperature Coefficient			0.05	%/°C	
Overtemperature Protection					Auto resetting
Remote Sense			0.25	V	Compensate for a maximum voltage drop for 0.25 V

Application Notes: Analogue Signals

Global AC OK/Power Fail

Global AC OK is an isolated transistor of an optocoupler providing a minimum of 5 ms warning of loss of output regulation. The signal is fully isolated and the collector and emitter must be connected externally.

Maximum sink current 2 mA, maximum voltage 60 V.

Global DC OK

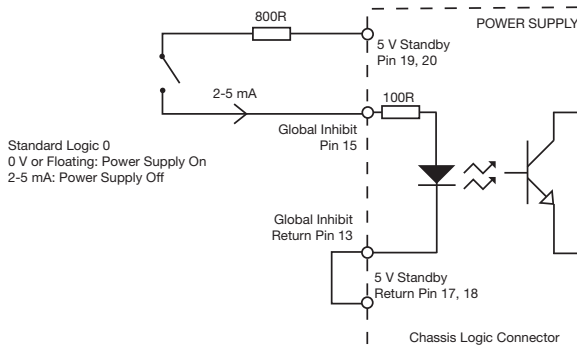

Global DC OK is an isolated transistor of an optocoupler providing warning that the output voltage has fallen below 90% of nominal. The signal is fully isolated and the collector and emitter must be connected externally.

Maximum sink current 2 mA, maximum voltage 60 V. On Dual output module, DC OK monitors V1 output only.

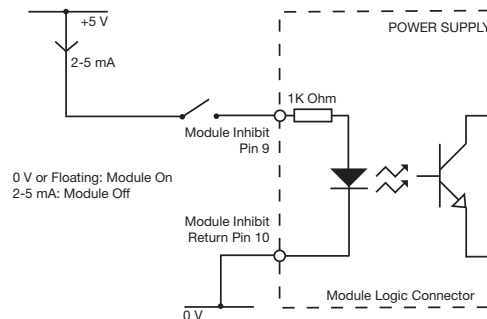

Global Inhibit

Global Inhibit is an isolated control signal input which turns the power supply off by supplying 2 to 5 mA into the pin.

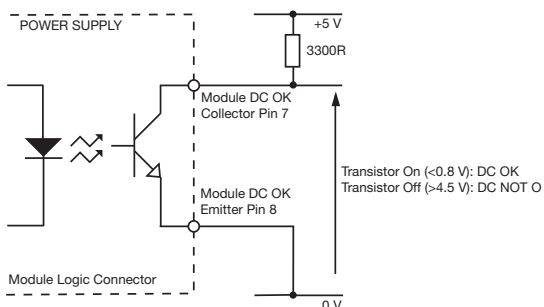

Module Inhibit

Module Inhibit signal is an isolated control signal which turns the module off by supplying 2 to 5 mA into the pin.

Module DC OK

Module DC OK is a nominal "ON" isolated transistor of an optocoupler which provides a warning of the loss of output regulation on the main output of the module. Maximum sink current 2 mA, maximum voltage 60 V.

Current Share

Connecting pins 3 and 4 of like voltage modules (4 maximum) within the same chassis will force the current to share between the outputs.

Signals & Controls

Analogue Signals

Name	Global, On Chassis	Local On Module	Description
AC OK	•	•	Global AC OK is an isolated transistor of an optocoupler providing a minimum of 5 ms warning of loss of output regulation. The signal is fully isolated and the collector and emitter must be connected externally. Maximum sink current 2 mA. Maximum voltage 60 V.
DC OK	•	•	Global DC OK is an isolated transistor of an optocoupler providing warning that the output voltage has fallen below 90% of nominal. The signal is fully isolated and the collector and emitter must be connected externally. Maximum sink current 2 mA. Maximum voltage 60 V.
	•	•	Module DC OK is a nominal 'ON' isolated transistor of an optocoupler which provides a warning of loss of output regulation on the main output module. Maximum sink current 2 mA. Maximum voltage 60 V.
Inhibit	•	•	Global inhibit is an isolated control signal input which turns the power supply off by supplying 2 to 5 mA into the pin.
	•	•	Module inhibit signal is an isolated control signal which turns the module off by supplying 2 to 5 mA into the pin.
Voltage Program	•	•	1.5 - 5 V signal will program the module over the range.
Current Share	•	•	Connecting pins 3 and 4 of like voltage modules (4 maximum) will force the current to share between the outputs.

Digital Signals

Name	Description
Select Module (PAGE)	Each module can be addressed individually via this PMBus commands.
On/Off (OPERATION)	The command will turn off or turn on the selected module.
Voltage Program (VOUT_COMMAND)	The command will set the output voltage of the selected module. If multiple modules are connected in parallel, this command will be applied to all paralleled modules.
Maximum Voltage Level (VOUT_MAX)	This command will set an upper limit of the selected output module voltage. If a voltage is programmed via Voltage Program (VOUT_COMMAND) above to be higher than VOUT max. This maximum voltage level will take priority and limit the voltage to this set level. If multiple modules are connected in parallel, this command will be applied to all paralleled modules.
Overvoltage Alarm Set Point (VOUT_OV_FAULT_LIMIT)	The command will set the selected module's voltage threshold value such that any measured output voltage above this threshold will signal a fault. If multiple modules are connected in parallel, this command will be applied to all paralleled modules.
OCP Set Point (IOUT_OC_FAULT_LIMIT)	The command will set the selected module's current threshold value such that any measured output current above this threshold will signal a fault. If multiple modules are connected in parallel, this command will be applied to all paralleled modules.
Output Voltage Readback (READ_VOULT)	This command will return the actual measured output voltage value of the selected module.
Output Current Readback (READ_IOULT)	This command will return the actual measured current voltage value of the selected module.
Unit Temp Readback (READ_TEMPERATURE1)	This command will return the actual measured highest temperature value from the various monitored points.
XP Power Readback (MFR_ID)	This command will return the XP Power name as the manufacturer.
Stock Key Readback (MFR_MODEL)	This command will return the STOCK KEY of the product and not the model number. This assumes the product has been configured by XP and not via distribution.
Combined Fault Alarm (STATUS_MFR_SPECIFIC)	OCP, SCP, OTP, UVP, OVP
Output Overvoltage Warning (STATUS_VOULT)	This command will signal 3 different output voltage faults. Vout >10% warning of Vprogram, Vout >15% fault of Vprogram & when a voltage is programmed greater than the overvoltage set point.
Output Over Current Warning (STATUS_IOULT)	OC Fault & Warning
Over Temp Warning (STATUS_TEMPERATURE)	OT Fault & Warning as set by OT_Fault and OT_Warn
Fan Fail (Optional) (STATUS_FAN_1_2)	This command will signal 2 different fan fail conditions when the 3 wire fan option has been selected. Fan speed below 3000 RPM fault expected speed and below 5000 RPM warning expected speed.
